Jeremy Scheuerman

31 August 2020

### Homework 0

My name is Jeremy Scheuerman, I was born and raised in Kingsville Maryland in Baltimore county. I am a Junior here at Salisbury University and I have been going here since my freshman year in 2018, I started out as a business major but during the summer after my freshman year I found my passion in Computer Science and decided to change my major, I minor in communications as well. Computer science is my interest inside and outside of the classroom, over the summer I did a job scripting in python and working with mysql and raspberry pi and additionally PLC logic controllers and industrial conveyor panels. In my free time I've worked on game development as well, with programming, music, art, and game design. I love learning about linux os and networking as well as network penetration testing and ethical hacking with kali linux. I've built pcs as well as fixed them, I've taken laptops apart fixed them modified them (and broken them haha). I look forward to learning C++ due to its speed at machine level and usefulness and developing applications and also for game design as it is a great language for videogame development. I look forward to learning this semester and hope for a great class!
